Attendance Remote Network Interface

Overview

The purpose of this Remote Network Interface is to register a patrons attendance to a specific event. The Remote Network Interface supplements the Attendance form in the current system.

Data Flow

This Remote Network Interface produces an HTML form that displays the following information for the user

Event Name - List of current Events

Card Number - The Card Number of the attending Patron

Selecting an Event and swiping a patron's card registers the patron and returns a success message. If the patron has already been marked as attending the event on that day, an error message is returned.
